

Health eMed™
bringing your healthcare home

Clinic@HomeSM

Client Experience

Clinic@Home is a digital system of care that enables telemedicine services to be performed in the home setting such as scheduled virtual clinical visits, remote patient monitoring and significantly improved medication adherence through medication therapy management. Clients are provided a 50-inch Smart TV, outfitted with multi-point video capability and integrated bluetooth devices such as a medication auto-dispensing unit, pulse oximeter and thermometer which are all connected to Health eMed's platform. The data is securely processed by the proprietary algorithm of care and this AI drives Clinic@Home activities to serve the clients and their care team in the convenience of their home.

Clinic@Home provides convenience to the clients it serves. **"It keeps me on my toes. I'm now taking my medications on time. The machines make me not forget."**

Clients love Clinic@Home because it allows them to manage and monitor their own health. **"Before, trying to go to the doctor and getting my medications was really stressful for me. This medication system is wonderful. I'm now trying to get this system for my wife."**

A Public Benefit Corporation

John – HealtheMed Client

John has utilized the full array of HealtheMed functions for the last few months. He uses the “Clinic@Home” on a daily basis while living alone. Though John has weekly contact with his County case manager and is in close communications with his IHS worker, he ultimately holds the responsibility in monitoring his health day in and day out. HealtheMed has been a reliable source of comfort and stability in doing so.

Prior to using HealtheMed, John struggled to keep in touch with his health. He relied on visits from his care team to check up on his vitals, remind him of his medication schedule and assess his mental health. He required travel assistance to attend appointments, noting the discomfort and anxiety with the car trips and waiting rooms.

Since HealtheMed came into his life, John’s health has steadily increased. He utilizes the system’s sleek 50-inch Smart TV to remind him of his medication schedule, meet with his doctors, and track his vitals. John uses the numerous Bluetooth-connected devices to self-monitor his status every day in order to stay in touch with his body and needs. Between the pulse oximeter, weight scale and thermometer, he’s constantly aware of his physical state and feels empowered. His system allows for hybrid-telemedicine to occur. That’s having a HealtheMed nurse come in his home while an advanced practitioner conducts a virtual care video appointment. This includes the standard vitals assessment in the comfort of his bedroom.

John is grateful for the array of compatible devices that work in the HealtheMed system to give him the freedom and ability to manage his health in his home and on his own schedule. He loves the service team, especially highlighting their attention to detail to cater the platform and experience to his particular situation. Individuals like John exemplify how HealtheMed impacts the lives of its clients in providing not only a telemedicine-enabling platform, but a community of care with the clients as the focal point.

“Everything now is so economical and convenient for me. I don't have to run anywhere or go anywhere. I can talk to the doctor right over the TV.” - *HealtheMed Client*
