***Introducing Nation's First In-Home Digital System of Care  
Designed for Minnesota Medicaid Participants***

HealtheMed's *Clinic@Home*™ Featured at Minnesota Social Service Association Conference

(Minneapolis, MN) -- [HealtheMed](#), a Minnesota-based healthcare solutions company, launched the nation's first in-home digital system of care dedicated to breaking down access to care barriers for Medicaid waived participants. The system will be on display this week at the Minnesota Social Service Association (MNSSA) [Training Conference and Expo](#) that begins later this week at the Hilton Conference Center in downtown Minneapolis.

Approved by the Minnesota Department of Human Services, the company's integrated technology approach, called *Clinic@Home*, enables the state's most vulnerable and often overlooked citizens to remain independent longer because care services are made available via technology installed in their homes.

*Clinic@Home* will be on display in booth #109 at the MNSSA conference, the largest health and human services event in the Midwest where nearly 2,000 health and human service professionals will gather. HealtheMed's Nurse Director, Shannon Holley-Smith, BSN, RN, will also be presenting *Clinic@Home* during an educational session for case managers and county directors on Wednesday, March 16 from 1:30p-2:30p.

According to Thomas Spencer, CEO of HealtheMed, “Due to medical, social, and financial conditions, many Medicaid waived participants are not able to receive traditional forms of medical care. Our digital system of care dramatically improves the likelihood that these members of our society can remain independent and stable in their homes and avoid ER visits and facility admissions. This is not only good for the participants, but it also reduces the total cost of care for this population that has historically represented a significant portion of the state’s annual Medicaid spend.”

### **How it Works**

Clients receive a 50” Sony smart TV, an automated medication dispenser, and doctor-ordered remote patient monitoring (RPM) devices such as a contactless thermometer, blood pressure monitor, and a pulse oximeter. Together, these connected devices enable the care team to monitor client health while also enabling clients to manage their own health more proactively from the comfort of home. Interaction during practitioner visits on a large TV screen, rather than a smart phone or tablet, makes the encounter more engaging and more powerful than other telemedicine platforms. The HealtheMed hybrid-telemedicine approach means that a HealtheMed consulting nurse is present in the client’s home during the telemedicine visit to make it more effective.

The *Clinic@Home* solution is also advantageous for county case managers who are responsible for supporting Medicaid waived clients. It helps them stay better connected to their clients and coordinate the support their clients need before a problem might occur. The *Clinic@Home* solution is installed and maintained by HealtheMed, and it provides visibility in the client’s home and much needed feedback to the entire care team.

### **About HealtheMed**

HealtheMed is a public benefit corporation dedicated to enriching the lives of marginalized populations in the state of Minnesota. Its first-of-its kind Clinic@Home care delivery platform now enables Minnesota Medicaid waived clients to get better access to health care and support in their homes. Clinic@Home helps case managers and care team members stay better connected with their clients and effectively deliver more focused and efficient support.
